15192	<i>S. m. brevirostris</i>	<i>Sublegatus modestus brevirostris</i>	Paraguay Kortnæbbet Krattyrann	Orbignys Strauchtyrann		(d'Orbigny & Lafresnaye, 1837)	e Bolivia, Paraguay and Uruguay to c Argentina		ENG, TAX, PHY	Change English name of Chapada Suiriri to Chapada Flycatcher (SACC). Nomenclatural change for the species epithet is required after an examination of the type series of <i>affinis</i> showed that it is actually referable to Chapada Flycatcher. <i>S. islerorum</i> Zimmer et al., 2001 becomes a junior synonym. Recent phylogenetic studies show that Chapada Flycatcher is not a member of <i>Suiriri</i> , but rather is sister to <i>Sublegatus</i> . Assigned to <i>gen. nov. Guyramemua</i> : Lopes et al., 2017, which is neuter, requiring agreement in the spelling of the species epithet from <i>affinis</i> to <i>affine</i> (Lopes et al. 2017).

									The family Vangidae was historically restricted to a diverse and monophyletic set of Madagascan taxa. Molecular analyses support expansion of the family Vangidae to include the helmetshrikes (Prionopidae), woodshrikes and allies (Tephrodornithidae), and shrike-flycatchers (<i>Megabyas</i> and <i>Bias</i> , previously placed in the Platysteiridae) (Reddy et al. 2012; Jønsson et al. 2012, 2016; Fuchs et al. 2012; H&M 4; HBW).

Scientific Name	Scientific Name	Dansk Navn	Tysk Navn	Engelsk navn	Authority	Breeding Range	Nonbreeding Range	Code	Comment
									Recent phylogenetic analyses have shown that <i>Platylophus</i> is not a true corvid (Corvidae), but rather has an unsettled position within the Corvoidea radiation (Jönsson et al. 2008, Aggerbeck et al. 2014, Winkler et al. 2015; Oliveros et al. 2019; Jönsson et al. 2011; Jönsson et al. 2016, Fuchs et al. 2019; Stervander et al. 2020). Best placed in its own family Platylophidae which has been recently formally described (Gaudin et al. 2021). However, an alternate name for this family, Lophocitidae, may have precedence depending on whether Lophocitae Kaup, 1855 is interpreted as having been originally introduced as a family-group name or as a genus-group name (Gaudin et al. 2021; Raty in litt. 9/10/21, Bird Forum https://www.birdforum.net/threads/crested-jay.323243?page=2).

20472	<i>L. s. superba</i>	<i>Lophorina superba superba</i>	Kraveparadisfugl	Kragenparadiesvogel	(Pennant, 1781)	Kobowre (=Weyland Range, wc New Guinea) to Yuat-Strickland Rivers Divide (ec New Guinea)		SSP, TAX	The species group epithet <i>superba</i> has been traditionally associated with the <i>Lophorina</i> of the Vogelkop Peninsula. However, the type specimen is lost and its taxonomic identity may be controversial. For this reason a neotype has been recently chosen to fix application of <i>superba</i> Pennant to the population of <i>Lophorina</i> that Daubenton's plate 632 in his Planches Enluminées (1765–1781) most closely and most likely depicts: the western cordillera form. With this neotypification, <i>superba</i> Pennant, 1781 replaces <i>feminina</i> Ogilvie-Grant, 1915 which becomes a synonym. Use of Pennant, 1781 rather than Forster, 1781 for the author of <i>superba</i> follows the authors of the neotypification. See Irestedt et al. (2017). However, Elliott et al. (2020) argue that this neotypification is neither required nor justified and, as such, this revised nomenclature of the <i>Lophorina</i> complex should be rejected in favour of traditional usage.
