

Videnskabelige, danske, engelske og tyske Navne på alverdens fugle

IOC List by Gill, F, D. Donsker and P. Rasmussen (Eds). 2022
tilføjet danske og tyske navne af NAVNEGRUPPEN
for

**Dansk Ornitologisk Forening og
Landsorganisationen Danske Fugleforeninger**
ved

Mogens Behnke-Pedersen - Svend Rønne - J. Møller Hansen - Jon Fjeldsø

De danske navne er stillet i forslag og kan derfor ændres, hvis der er behov herfor.
Navnegruppen har efter bedste evne sat sig for at give de bedste navne.
I nogle tilfælde er bedste evne ikke godt nok, og navnet kan
af mere eller mindre indlysende grunde være uheldigt eller forkert.
I så fald vil gruppen meget gerne høre om det og vil efterfølgende tage stilling til navngivningen.
Vi er derfor interesserede i henvendelser i tilfælde af sådanne uheldige navne.
Kommentér på Navnegruppens e-mailadresse. Navnegruppen@dof.dk

For at forenkle søgningen, benyttes bindestreger primært i forbindelse med todelte stednavne,
for eks. Costa Rica-krattinamu, São Tomé-harlekinvagtlet og Sri Lanka-buskvagtlet o.s.v.

De officielle tyske navne er med tak lånt fra
Die Vögel der Erde
Arten, Unterarten, Verbreitung und deutsche Namen

Peter H. Barthel, Christine Barthel, Einhard Bzzel, Pascal Eckhoff,
Renate van den Elzen, Christoph Hinkelmann & Frank D. Steinheimer

Deutsche Ornithologen-Gesellschaft
Radolfzell 2021

De tyske navne på underarter i grå tekst er tilføjet fra andre kilder

Samt fra navne på papegøjer fra
Deutsche Namen der Papageien
Akademie für Vogelhaltung, Berlin 2022

										Species status of these <i>Anser</i> geese uncertain. Split of <i>Anser serrirostris</i> from <i>A. fabalis</i> followed AOU/NACC 2007 but may have been premature. Rukonen et al. (2008) suggest that <i>middendorffii</i> is basal to the clade that includes both <i>fabalis</i> and <i>serrirostris</i> , based on mtDNA control region. Author citation Gould, 1852 rather than Swinhoe, 1871 (H&M 4:10).

									Separate Spotted Dove and Laughing Dove from <i>Streptopelia</i> at the generic level (Cheke 2005; BLI) based on the phylogenetic analysis of Johnson et al. (2001). <i>Spilopelia</i> has precedence over <i>Stigmatopelia</i> for this clade (Schodde 1997). Based on the degree of genetic divergence, some authorities continue to retain <i>Spilopelia</i> in a broader <i>Streptopelia</i> that includes it and <i>Nesoenas</i> as subgenera (Dickinson & Remsen 2013; Schodde 1997).

6844										Until recently, the genera of cormorants and the distinctions between "shags" and "cormorants" have remained mostly unresolved due to conflicts among studies and missing taxa (Siegel-Causey 1988; Kennedy et al. 2000; Christidis & Boles 2008). We follow the comprehensive phylogenetic studies of Kennedy & Spencer (2014) and Kennedy et al. (2019) in resequencing this family. Generic revisions were accepted for the North American species by NACC (Chesser et al. 2021) but narrowly declined by SACC (Proposal 648).

8605	Megascops roraimae	Megascops roraimae	Roraima Dværghornugle	Roraima-Kreischeule	Foothill Screech Owl	(Salvin, 1897)	SA : ne Colombia to n Venezuela and tepuis of s Venezuela, Guyana, Suriname and adjacent Brazil; also e slope of the Andes from Colombia to Bolivia		AS, SSP, ENG	<i>M. roraimae</i> is split from <i>M. guatemalae</i> (Holt et al. 1999; König et al.1999; cf. SACC 12; H&M 4). The form from the northern ranges of Venezuela is attributable to the taxon <i>pallidus</i> (Hekstra, 1982; Krabbe 2017), perhaps a separate species (Dantas et al. 2016). Change English name of <i>M. roraimae</i> from Roraiman Screech Owl to Foothill Screech Owl with inclusion of <i>napensis</i> (Krabbe 2017; SACC 771).
8606	<i>M. r. roraimae</i>	<i>Megascops roraimae roraimae</i>	Roraima Dværghornugle	Roraima-Kreischeule		(Salvin, 1897)	tepuis of s Venezuela, Guyana, Suriname and adjacent Brazil			
8607	<i>M. r. pallidus</i>	<i>Megascops roraimae pallidus</i>	Lys Roraima Dværghornugle			(Hekstra, 1982)	Serranía de Perijá (n Colombia and Venezuela) and coastal mountains of n Venezuela		SSP	Recognized as valid in Krabbe (2017).

8767	ORDER LEPTOSOMIFORMES	ORDER LEPTOSOMIFORMES							PHY	The Cuckoo-roller is the only member of an ancient lineage with no known relatives among modern birds and thus put into a separate Order, Leptosomiformes, distantly related to mousebirds and trogons among other Core Landbirds (Hackett et al. 2008; Prum et al. 2015). The correct spelling of this family name is Leptosomidae, not Leptosomatidae (Bock 1994). Change English name of Cuckoo Roller to Cuckoo-roller to comply with the IOC-WBL established rules for English name construction. <i>Leptosomus</i> is not a "roller" but is only distantly related.

9985	Family Megalaimidae - 34	Family Megalaimidae - 34	Asiatiske Skægfugle	Orientbartvögel	Asian Barbets				PHY	Asian barbets (Megalaimidae) are the basal outgroup to the African barbets and in turn the New World barbets and toucans (Moyle 2004). Genus <i>Psilopogon</i> takes precedence over <i>Megalaima</i> and is therefore used, given that Fire-tufted Barbet is embedded in the latter as sister to Great Barbet (Moyle et al. 2004; H&M 4).
